## Instructions on the storage and care of illuminated mirrors

No product warranty or guarantee can or will be given in the case of improper cleaning and storage of the mirror. In order to avoid this, you should always adhere to the following instructions:

1. Please note before use and installation: The storage of mirrors in or on packaging materials must be limited to the shortest possible time. During storage, care must be taken to avoid moisture and to ensure sufficient air circulation. This means that the product may only be stored in dry, evenly tempered rooms and not in the immediate vicinity of radiators and aggressive substances or vapours.
2. As far as possible, use a damp window leather to clean your mirror. You can also use commercially available glass cleaner. Never spray the cleaner directly onto the surface to be cleaned but rather onto the cleaning cloth.
3. Do not use any scouring agents, cleaning alcohols or cleaning agents containing vinegar, chlorine or ammonia. Avoid using coarse cleaning cloths, metal brushes, sponges or microfibre cloths.
4. When cleaning, make sure that no water or cleaning agent can penetrate and get left behind in the gaps at the edges of the mirror because this can cause damage to the product.
5. Excessive use of water and cleaning agents must generally be avoided.
6. After cleaning, the product should be carefully wiped dry and polished. This will prevent the build-up of limescale deposits and stains.
